

- 0-150°C Operating Temperature
- Calibrated Over The Operating Temperature Range
- Compact Absolute Pressure Sensor
- 1ms Response Time
- Pressure/temperature read-out
- 3.3V Operation
- ± 0.10% Linearity Error
- $\pm$  0.2% Full Scale Error
- 15 Bit Digital Output SPI
- 6,000 PSI Pressure Range
- Media Harsh Liquid, Air, & Gas

#### **DESCRIPTION**

The APS200 is a pressure transducer manufactured for monitoring pressure and temperature in down hole applications. The continuous operating temperature is 150°C with external pressures of up to 8,000 PSI. The 316L stainless steel media isolated port design allows for pressure measurement of liquid or gas media.

The APS200 series utilizes MEMS piezo-resistive sensors pressurized on the passive backside of the SS diaphragm which has superior long term stability and accuracy (.10% Linearity).

The design is simple and proves value for OEM customers. Please contact the factory for custom design availability.

#### **APPLICATIONS**

- · Oil and Gas Wells
- · Water Wells
- Industrial Automation
- Compressor
- Pneumatic
- Hydraulic

# Maximum Environmental Ratings

### **Application Information**

### **Package**

The body is made of 316L stainless steel, which is tolerant of most harsh chemicals.

### **Stability**

The silicon MEMS pressure sensor is welded into a 316 stainless media isolated housing. That in turn is welded in the 316 stainless housing.

Additional stability is gained from a 2 week factory burn-in.

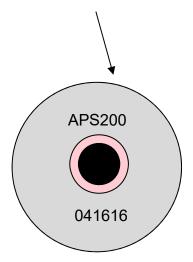

### **Pressure port**

The pressure port is a ½" NPT fitting and the port for the electrical connection is 1/4" compression fitting.

### **Cover Marking**

Part Number; Date Code

Serial Number is added to the side of the cover. High temperature Kapton label.

#### Media

The 316 media isolated pressure port is tolerant to most media including oil, air, gas, some corrosive media, and salt water.

### Wetted parts

The wetted surfaces are composed of 316L stainless steel.

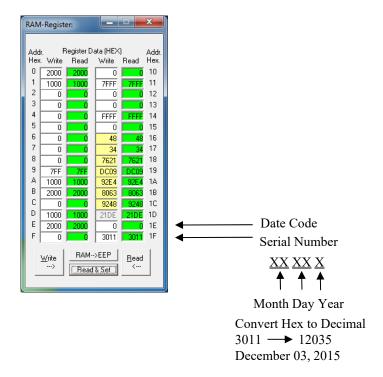

### **Pressure Range**

The standard pressure range is 6,000.

### **Soldering**

The electrical connection wires for the APS200 sensor can be easily attached to a connector or soldered directly to a board.

#### **EEPROM Serialization**

# APS200 Digital Output Operational Characteristics

$V_{+} = 5V$ , $V_{-} = 0V$ , Temperature	= 25°C				
PARAMETER	SYMBOL	Min	Тур	Max	UNITS

Pull-Up Resistor	RI2C_PU	500			Ω
Input Capacitance (each pin)	Cl2C_ln			10	pF

Notes: 1) Measured at zero pressure. 2) Defined as best straight line 3) Measured from 0°C to 150°C.

# Electrical Pin Configuration (Digital [SPI])

Yellow - SCLK

Green - MISO

White- INT/SS

Red - V+

Black - GND

Fig. 1 Orange – MOSI

## **Digital Interface – SPI**

On power-up, there is a 20ms delay before the data out transfer will start. There are two 16 bit output words. The first is the sensor output and the second is the temperature. The high byte and MSB come out first. The output is 15 bits and the MSB is always 0.

The serial clock (SCK) is active low.

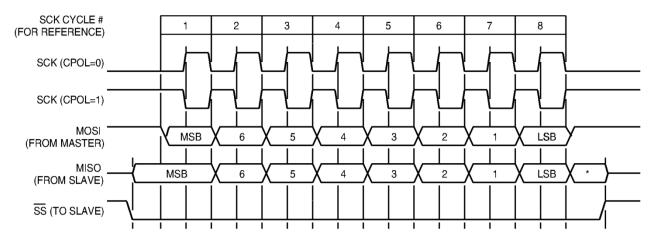

Figure 2

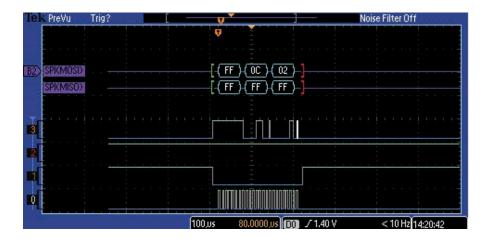

Nr.	Parameter	Symbol	min	typ	max	Unit	Conditions
1	SCK to internal clock frequency ratio	fsck_clk			f <sub>CLK</sub> /5		f <sub>SCK</sub> must be 5 times smaller than f <sub>CLK</sub>
2	MISO hold time after SCK sample slope	tspi_HD_Miso	200			ns	
3	MOSI setup time before SCK sample slope	t <sub>SPI_SU_MISO</sub>	2/f <sub>CLK</sub>				
4	/SS setup time before SCK sample slope	t <sub>SPI_SU_SS</sub>	10			ns	
5	/SS hold time after SCK sample clk	t <sub>SPI_HD_SS</sub>	1/ f <sub>SCK_CLK</sub> *
