

- -40°C - 150°C Operating Temperature
- ± 0.5°C Typical Accuracy
- 0.03125°C Temperature Resolution
- Wide Supply Range: +2.7V - +5.25V
- 316 Stainless Steel Housing
- 3 Wire, SPI Interface (Half Duplex)
- Media – Liquid, Air, & Gas

DESCRIPTION

The ATS80 sensor is digital temperature sensor with a 3 wire SPI output. The probe body is 316 stainless steel and is designed to be inserted into the media to be measured.

The 28 AWG, PTFE wires are potted with a high temperature epoxy into the housing. The terminations can be tinned or a connector can be specified.

APPLICATIONS

- Industrial Automation
- HVAC
- Semiconductor
- Liquid /Gas Chromatography
- Commercial Ovens

Maximum Environmental Ratings

Operating Temperature -40°C to 150°C

Storage Temperature Range -65°C to 160°C

Operational Characteristics

$V_+ = 5V$, $V_- = 0V$, Temperature = 25°C

PARAMETER	SYMBOL	Min	Typ.	Max	UNITS
Supply Voltage	V_{DD}	2.7	5	5.5	V
Operating Temperature	T_s	-40		150	°C
Supply Current	I_{DD}		1.6		mA
Temperature Error	t_e	-0.5		0.5	°C
Response Time	t_R	1	2	20	ms
Update Rate	t_U		1.2		ms
Temperature Resolution			0.03125		°C
SPI Interface					
Input Low Level	V_{in_low}	0		.8	Vdd
Input High Level	V_{in_high}	2.5		1	Vdd
Input Capacitance	C			10	pF
Output Low Level	V_{o_low}			.4	Vdd
Output Capacitance	C			50	pF

Temperature Sensor Digital Interface – SPI

Figure 1 shows the timing diagram for a serial read from the temperature probe. The CS line enables the SCLK input. Thirteen bits of data plus a sign bit are transferred during a read operation. Read operations occur during streams of 16 clock pulses. The first 2 bits out are leading zeros and the next 14 bits contain the temperature data. If CS remains low and 16 more SCLK cycles are applied, the temp probe loops around and outputs the two leading zeros plus the 14 bits of data that are in the temperature value register. When CS returns high, the DOUT line goes into three-state. Data is clocked out onto the DOUT line on the falling edge of SCLK.

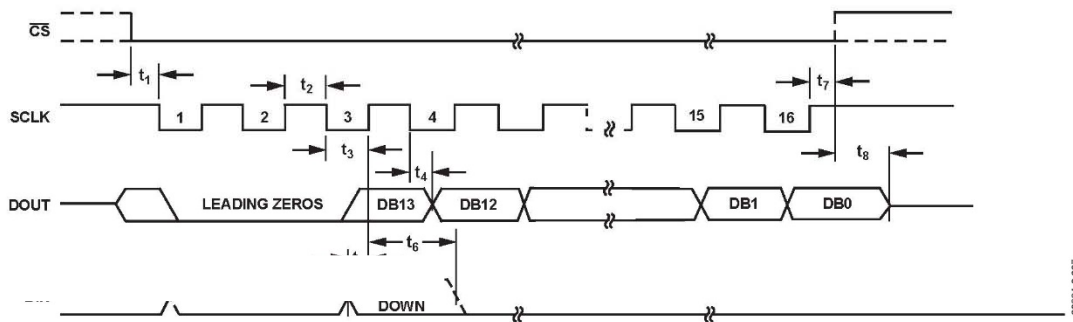

Figure 1

Parameter ¹	Limit	Unit	Comments
t ₁	5	ns min	CS to SCLK setup time
t ₂	25	ns min	SCLK high pulse width
t ₃	25	ns min	SCLK low pulse width
t ₄ ²	35	ns max	Data access time after SCLK falling edge
t ₅	20	ns min	Data setup time prior to SCLK rising edge
t ₆	5	ns min	Data hold time after SCLK rising edge
t ₇	5	ns min	CS to SCLK hold time
t ₈ ²	40	ns max	CS to DOUT high Impedance
